Benchmarks and Indicators

Overview

Based on goal statements carried over from the 1994 Comprehensive Plan community process, in late 2004 tribal members proposed objectives to continue to fulfill those goals. The objectives that pertain to each program are listed in the *Goals and Objectives* section of this plan.

From the goals and objectives, as well as needs data identified in the Comprehensive Plan survey, example **benchmark tables** were created for inclusion in the Comprehensive Plan. Each example table represents interconnected, Comprehensive Plan goals. The benchmark tables list “**Indicators**” to be measured on the Y-Axis (vertical list, column) and Years on the X-axis (horizontal, row). Certain years are identified as “**Target**” years (the years when certain goal numbers are estimated to be met). In the cells of the table, measurements are placed so that for each year a number or percentage is entered. These “indicator measurements” are the numbers used to quantify the “*measurable objectives*” set forth at the creation of the goal accomplishment plans that the table represents.

Tribal member goals, objectives, and needs, as well as the statistics currently gathered by each program, are the inspiration for these indicators. In addition, federal and state indicators have been used so that programs may use them for comparison and reporting purposes. Keep in mind, the main difference between the measurements used to evaluate individual program progress and the benchmark table indicators is that, for the Comprehensive Plan, the indicators are expected to measure long term progress and likely involve several programs. Furthermore, as data collection and database connectivity expands, so should these tables. Until then, the annual measurable objectives and reports of associated measures each program submits to Tribal Administration will suffice.
